

Healthcare

PREVENT VET BILLS

BUY ROYAL CANIN
URINARY SO WET/DRY

Sprinkle the dry urinary so into the food every other 3-5 days and this will prevent most problems relating to the health of your cat.

GIVE BONE! It will clean the feline's teeth and prevent PERIDONTITIS!

Allergies

If your kitten is allergic to the brands listed in the nutrition section, then you can try a generic dry food brand such as

Kitten Kaboodle

Or

Acana Wild Atlantic
Some owners have had success with kitten allergies

<https://www.wildtraxsupply.com>

Vitamin B-10 & 12

Give orally or in water if kitten starts to look or feel frail

Sprinkle on or Mix with raw muscle meat and bone. Dosage is per meal for Body Weight.

25 lb.....	1 1/4 t	200 lb.....	3 1/3 TBS
30 lb.....	1 1/2 t	225 lb.....	3 3/4 TBS
40 lb.....	2 t	250 lb.....	4 TBS
50 lb.....	2 1/2 t	275 lb.....	4 1/2 TBS
60 lb.....	1 TBS	300 lb.....	5 TBS

NEVER declaw your cat!

Declawing a cat is the equivalent of cutting a person's fingers off at the first knuckle.

VACCINATIONS

1st round vacc. given 8 wks

2nd round vacc. given 12 wks

Rabies vacc. given 12 wks

Diet 3

Orijin (high budget)

Acana (high budget)

Taste of the Wild (moderate budget)

Blue Wilderness Frugal (moderate budget)

Diamond -Maintenance- (frugal budget)

Diamond -Naturals- (frugal budget)

Instinct (high budget)

Petcarean GO (moderate budget)

Earthborn Holistic (moderate budget)

Wellbeing (new life acclimation)

Environment acclimation

-Please isolate your kitten to a section of your home for 3-5 days. He/she is only to see the primary caretaker during this time. Make sure the litter, water bowl, and food are all in reach. The point of this activity is to switch dependency from the breeder to the new owner/environment. After this period, you can gradually open different areas of your home.

Boredom

-Invest in cat trees/condos. When a cat tree is bought it will be used as a viable outlet when no other entertainment is present or if the owners are away.

Bonding

-Please allot 30 minutes of playtime with your kitten each day. By doing this, the bond will grow and if the kitten happens to get loose(outside) due to unforeseen circumstances, then the kitten will remember being treated favorably and will most likely return. (NEVER LET YOUR KITTEN OUTSIDE or EXTREME MICROMANAGEMENT IF YOU DO)

Behavior

-The behaviors you want perpetuated throughout adulthood must be rewarded with treats and snacks. The behaviors you disagree or find displeasing should be reprimanded with a small water bottle (spray mist). One squirt from the mist lets the bengal cat know what the undesired behavior is and will ultimately stop this behavior with continued use of the spray bottle.

Tame & Free

-Please try and refrain from caging as much as possible, Bengal cats need time to roam as their heritage dictates their spontaneity.
